AUDIO & GAUGES

2014
HARLEY-DAVIDSON®

Better-sounding tunes, and a better sense of direction. Concert-hall quality Boom!™ Audio sound system components keep you entertained at every turn, while user-friendly, easy-to-read Road Tech™ GPS navigation equipment helps keep you from taking a wrong turn.

THE CHOICE IS CLEAR

Harley-Davidson® Boom!™ Audio is an exciting collection of integrated audio components designed to combine the maximum number of features with an easy-to-use interface. And because your bike's Original Equipment radio is designed for plug-and-play integration of Boom! Audio equipment, you can easily create the custom sound experience you've always wanted.

BIKE-TO-BIKE COMMUNICATIONS KIT
Bike-to-Bike system allows you and your passenger to talk with other riders, even when you are miles apart. Integrated CB features easy to use handlebar controls and will mute the radio while in transmit or receive mode.

BASS BOOSTER PORTS
Boost bass response without adding a subwoofer. Standard equipment on many 2014 Electra Glide® models, and available for 2006-2013 models, these open ports permit the rear speaker pods to "breathe," using the Tour-Pak air space for a 21% increase in bass response and an 82% reduction in distortion.

FAIRING SPEAKERS
Capture every note. Designed for maximum performance in the harsh motorcycle environment, these waterproof two-way speakers feature increased sensitivity for 25% louder output, reduced distortion and improved clarity at speed.

TOUR-PAK® SPEAKERS
Surround yourself with sound. Forward-facing two-way speakers feature waterproof tweeters and injection-molded woofer cones with high-flux Neodymium magnets, and are sized to be a direct replacement for the factory speakers.

AMPLIFIERS
When loud just isn't loud enough. Rugged Fairing, Tour-Pak® and Saddlebag-mounted amplifiers provide increased volume, lower distortion, reduced clipping and fuller sound that cuts through wind and road noise.

Not all products are available in all countries – please consult your dealer for details.

FAIRING LOWER SPEAKERS
Nestled into the glove boxes of your vented fairing lowers, these vibration-tested waterproof two-way speakers feature rider directed tweeters for clear, crisp sound.

SADDLEBAG LID SPEAKERS
Directionally optimized for improved rider acoustics, these waterproof 5"x7" two-way speakers turn the latched and gasket-sealed saddlebags into large speaker enclosures for enhanced bass response.

Boom!™ Audio – 2014 Touring

A. BOOM!™ BOX 6.5GT RADIO KIT

Take a big step up the technology ladder. Designed for plug-and-play installation, the Boom! Box 6.5GT Infotainment System is the ideal upgrade for Touring models equipped with the standard Boom! Box 4.3 radio. One look at the brilliant 6.5" display, and you know that this is something special. Boom! Box 6.5GT features a low distortion 25 watt/channel amplifier that has been optimized for great sound in an open-air environment. The result is cleaner, sharper sound at volumes up to 25% louder than previous Original Equipment radios. Built-in automatic volume control compensates for the increased noise levels as speed increases, and automatically adjusts the bass and treble for optimal performance.

The feature-packed radio is factory-equipped with AM/FM radio, weather alert, integrated iPod and USB audio device playback, map-based GPS navigation, and Bluetooth pairing of mobile phones and wireless headsets. The 6.5GT features can be accessed via the glove-friendly touchscreen, joystick hand controls or with hands-free voice recognition. And it doesn't stop there. Optional Bike-to-Bike communication, XM weather and traffic services, and other features are just a plug-in module away.

Take your music to the streets. Boom!™ Audio Amplifier Kits allow you to crank up the volume with significantly less distortion. The amplifier provides more power than Original Equipment radio alone, resulting in increased volume, fuller sound reproduction, reduced clipping, and lower Total Harmonic Distortion (THD) than head unit alone. Unlike aftermarket amplifiers that connect between the radio and the speakers, the Boom! Audio amplifier bypasses the radio's internal power amp to produce the cleanest sound possible. The Boom! Audio Amplifier boosts the pure source signal, minimizing any distortion generated through the speaker output. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response, and the strong midrange response cuts through wind and road noise. The waterproof 4-channel, 75 watts/channel amplifier (300 watt total) has been designed from the ground-up for the harsh motorcycle environment. C. HIGH OUTPUT CHARGING SYSTEM

Heated clothing, heated seats and grips, decorative lighting, and high-output audio systems place added demand on the motorcycle's charging system. The motorcycle's charging system ensures that adequate power (voltage and current) is being supplied to the core motorcycle functions–Ignition, gauges, lighting and battery–as well as any additional powered accessories. When the charging system is unable to satisfy the power requirements of the system, the battery becomes a power source and begins to discharge. Repeated deep cycle charging shortens the battery's life–and can leave you stranded.

The Harley-Davidson High Output Charging System is engineered to provide abundant power for all your accessories–at any engine speed. With 54 amps of output at 4,000 rpm, accessories will operate at their peak performance–no more dimming lights, reduced stereo volume or under-performing heated gear. The system-matched stator, rotor and voltage regulator work together to meet the current demands of your bike.

Sitting in traffic, riding in parades, or just hanging out on Main Street–your motorcycle spends almost 20% of its running time at idle. At low RPM, the motorcycle's charging system delivers the least amount of current, and relies on the battery to make up the difference. The High Output Charging System delivers a 30% increase in output at 1000 RPM, which translate to an additional 6 amps of current (or about 78 watts of power). Maximum power output of charging system is 793 watts (based on constant voltage cold data).

Complete kit includes high performance rotor, stator, voltage regulator and all gaskets and hardware required for installation.

*NOTE: It is possible to overload your motorcycle's charging system by adding too many electrical accessories. If your combined electrical accessories operating at any one time consume more electrical current than your vehicle's charging system can produce, the electrical consumption can discharge the battery and cause vehicle electrical system damage. Ask your dealer for advice about the amount of current consumed by additional electrical accessories.
